EDUCATION

California State Polytechnic University, Pomona

Pomona, CA

BA in Computer Information Systems, Minor in Computer Science

Aug. 2022 – Dec 2026

President's List, Dean's List, Won CBA Dean's Honor Scholarship, Won Pace Setter's Scholarship

Coursework: Deep Learning Specialist Certification, Big Data Analytics & Cloud Computing, Database Design & Dev, Data Structures & Adv. Programming, Prob & Stats for CS & Eng, Multivariable Calc., Linear Algebra

EXPERIENCE

Sloka AI (Startup)

Aug. 2025 – Present

Software Engineer

Pomona, CA

- Designed and developed the **frontend platform** using **React** and **Next.js**, delivering an **intuitive, responsive interface** for teachers and students to track academic performance in real time
- Collaborating with a **cross-functional team** to engineer an **AI-driven analytics system** that identifies **student learning patterns**, pinpointing areas of excellence and improvement
- Implementing **interactive data visualizations** and **streamlined user workflows** to enhance clarity, engagement, and actionable insights for both instructors and learners

Research Team in Artificial Intelligence Applications and Implementations

Aug. 2023 – Dec 2024

Research Lead

Pomona, CA

- Led and managed a 20+ member research team**, driving the development of **cutting-edge machine learning models and AI-driven software solutions**
- Engineered and deployed a cybersecurity chatbot** with advanced **NLP capabilities**, leveraging **PyTorch** and **TensorFlow** to enhance threat detection and automated response
- Conducted AI workshops**, mentoring students on **deep learning, model development, and deployment strategies**, leading to a **25% increase in engagement and participation**

Research Team in Digital Forensics and Incident Response

Aug. 2023 – Dec. 2023

Research Lead

Pomona, CA

- Led a **15+ member research team** to **analyze, detect, and mitigate digital security threats**, applying **forensic investigation methodologies** to strengthen institutional **cyber defense systems**
- Organized and conducted **live decryption workshops**, providing participants with **hands-on experience in real-time threat analysis** and advancing their **practical cybersecurity proficiency**

Machine Learning HTGR Project

Sep. 2023 – Dec. 2023

Team Member

Pomona, CA

- Developed **neural networks** for predicting vehicle movements, **achieving 98% accuracy**, enhancing autonomous system reliability
- Optimized LSTM model** training by efficiently processing large-scale datasets with NumPy and Pandas, improving training speed and model precision

PROJECTS

QuantHub

Fall 2025

React — TypeScript — Supabase (PostgreSQL, RLS, Storage) — Docker — Vercel — Railway — GitHub

- Designed and built **QuantHub**, an open-source platform that enables users to **upload, version, and benchmark** quantitative trading strategies and datasets for reproducible research
- Engineered scalable backend services using **Supabase** to handle authentication, private **SQL** storage buckets, and real-time metadata tracking for strategies and datasets
- Developed an interactive frontend with **React + TypeScript**, featuring seamless upload workflows, real-time validation, and dashboards for managing benchmarks and results

Job Application Auto-fill Bot

Spring 2025

Python — Selenium — OpenAI API — FastAPI — Web Automation — AI Integration

- Developed an AI-powered bot that extracts resume data, answers application questions, and autofills job forms across platforms like Greenhouse using **Selenium** and **OpenAI's GPT-4**
- Engineered a modular, scalable architecture with robust error handling, dynamic form interaction, and developed a Chrome extension for user-friendly access
- Handled dropdowns, checkboxes, and file uploads with **semantic mapping** and **JavaScript injection**
- Enabled persistent QA matching using **vector embeddings** for faster, smarter auto-completion

Acne Detector

Fall 2024

YOLOv8 — React (Vite + TypeScript) — FastAPI — AI-Powered Dermatology Application — Model Optimization

- Curated and annotated a diverse image dataset of acne-affected faces for object detection and classification tasks
- Trained and optimized a **YOLOv8** model to detect acne and classify severity levels in real-time
- Built a full-stack web app using FastAPI and Vite+React for image uploads, live detection, and results display
- Improved accuracy and inference time through data augmentation, confidence tuning, and bounding box overlays

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, HTML, CSS, JavaScript, TypeScript

Frameworks: TensorFlow, PyTorch, pandas, NumPy, Seaborn, LangChain, NextJS, ReactJS, FastAPI

Applications: Vercel, Railway, Supabase, MongoDB, Docker, Kubernetes, Microsoft Azure, AWS, HuggingFace, Kaggle, Erwin, Docker, Neo4J, PostgreSQL, VirtualBox
